

Strip curtain

The strip curtain is used to separate premises with similar temperatures and where traffic is dense or where visibility is vital. Used as a back-up for an isothermal door it will cut thermal loss during opening. Dimensions match the clear openings of our doors.

Strips

Extruded transparent PVC, can be changed one by one
 Different versions for positive or negative temperature enclosures
 Strip dimensions : 200 x 2 mm
 Coverage 50%

Suspension system

Fixed part

PVC tube fixed to wall or under lintel by hanging PVC rings

Moving part

Orange polyethylene articulating shell entirely covering the fixed tube and to which are attached the strips

Fastening

Single strips are easily replaced by means of the stainless steel nuts and bolts system.

Options
